

Rainproof Photovoltaic Panel Service Commitment

Does a quality solar installation void a roof warranty?

No, a quality solar installation should not void your roof warranty. In fact, some companies provide both roofing and solar installation services and provide warranties for both. However, it is very important to go through an experienced, reputable solar company that uses quality equipment and installation techniques.

What types of warranties cover solar panels?

There are two basic types of warranties that cover solar panels. A product warranty protects you from defects in a solar panel stemming from material quality or manufacturing errors. This is also referred to as an equipment or materials warranty.

What is a performance warranty on a solar panel?

A performance warranty guarantees a maximum level of degradation- typically between .25% and .75% - per year so that in 25 years the panel will still have 80-90% of the power output it did in its first year. Performance warranties are important for sizing solar systems to maintain 100% offset for 25 years.

Are solar panels covered under Artistry warranty?

Nevertheless, certain solar installation companies will cover this under their artistry warranty. A solar panel's performance warranty, often known as its power output warranty, guarantees that it will produce at least some quantity of electricity for a set period after its expected 25-year lifespan has passed.

Are solar panel warranties transferable in a home sale?

In most cases, solar panel warranties are transferable to the new owner in a home sale. However, some warranties are restricted to the original owner, so it is crucial to clarify this point with the manufacturer and installer offering the warranty.

Can a solar panel warranty be voided?

For example, warranties may be voided if the solar panels are not installed according to specified guidelines or if unauthorized modifications are made. Certain solar panel warranties might not cover fire damage or other outside sources.

A non-waterproof solar panel may get flooded with water, causing less sunlight to reach the solar cells or even breaking individual cells. If this happens, they will likely not ...
