What is operation & maintenance (O&M) of photovoltaic (PV) systems?

This guide considers Operation and Maintenance (O&M) of photovoltaic (PV) systems with the goal of reducing the cost of O&M and increasing its effectiveness. Reported O&M costs vary widely, and a more standardized approach to planning and delivering O&M can make costs more predictable.

Do photovoltaic systems need maintenance?

The expansion of photovoltaic systems emphasizes the crucial requirement for effective operations and maintenance, drawing insights from advanced maintenance approaches evident in the wind industry. This review systematically explores the existing literature on the management of photovoltaic operation and maintenance.

What are NREL's best practices at the end of photovoltaic system performance period?

NREL's Best Practices at the End of the Photovoltaic System Performance Period report includes recommendations for system owners, asset managers, and industry service providers regarding the handling and disposal of waste, including reuse and recycling of PV modules and other components as a way to reduce environmental impact.

What is the IEA photovoltaic power systems programme?

The IEA Photovoltaic Power Systems Programme (IEA PVPS) is one of the TCPs within the IEA and was established in 1993. The mission of the programme is to "enhance the international collaborative efforts which facilitate the role of photovoltaic solar energy as a cornerstone in the transition to sustainable energy systems."

What climate zones do photovoltaic power plants operate in?

In the "Guidelines for Operation and Maintenance of Photovoltaic Power Plants in Different Climates" report, the agency provided a series of climate-specific O&M programs for four climate zones - moderate, hot and dry, hot and humid, and deserts at high elevation areas. It also looked at extreme conditions such as floods, cyclones, and snow.

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation, with abundant irradiance, stands out among various renewable energy sources. The global deployment of solar energy has experienced significant growth in the last 10 years. In 2022, a significant 231 GWdc of PV capacity was installed globally, resulting in a total cumulative PV installation of 1.2 TWdc.
