What is the difference between a true balcony and a mezzanine balcony?

True Balcony: A space on an upper floor with open railings, allowing outdoor access. Faux Balcony: Designed to look like a balcony but lacks a floor for standing. False Balcony: A small regular balcony with limited floor space and railings. Mezzanine Balcony: A real balcony located indoors, with a floor and railings.

What is a stacked balcony?

A stacked balcony is one of the most common types you will see around you and even all over the country. This structure is so ubiquitous because its mechanism and design can be impressively simple. This design imposes a very minimal load on the building structure and is oftentimes not connected to the building itself.

What is a balcony & how does it work?

It can be quite big and it provides an outdoor space that can be used all year long. A balcony is a platform on the outside of a building, enclosed by walls or balustrades, and supported by columns or console brackets. The platform projects from the wall of a building, usually above the ground floor.

What is a false balcony?

In terms of design, a false balcony has a railing, a protrusion from the side of the building, and the appearance of an actual balcony. However, it doesn't function quite the same from the inside of the house. False balconies can usually be found in condos and apartment buildings where space and real estate are scarce.

What are the parts of a balcony?

The parts of a balcony are the floor, the railings, the balustrades, and the support posts. The floor is the flat area of the balcony that you stand on, while the railings are the vertical bars around the perimeter. The balustrades are the decorative components of the railings, usually made of metal or stone.
