Why are PV inverters able to supply more short circuit current?

In principle the PV inverters are able to supply more short circuit current during fault scenarios than only 1 p.u. reactive current due to current reserve margin of the inverter system. The control is able to limit the current injection during faults to the nominal but also to an overload current limitation of the generation system.

Do photovoltaic inverters contribute to short-circuit currents?

To conduct this analysis, an autotransformer-based voltage dip generator is proposed as a means to test the photovoltaic inverters' contribution to short-circuit currents. Laboratory tests are then performed to obtain the short-circuit current contribution of eight single-phase photovoltaic inverters.

What happens if a photovoltaic inverter fails?

Grid failures may cause photovoltaic inverters to generate currents ("short-circuit currents") that are higher than the maximum allowable current generated during normal operation. For this reason, grid operators may request short-circuit current ratings from vendors in order to prepare for failure scenarios.

How does a PV inverter work?

According to the authors, PV inverters act as a constant power source trying to extract the same power for whatever voltage profile, and it is also affirmed that the manufacturers limit the PV inverters fault current from 1 to 2 pu.

Is a PV inverter a constant power source?

The PV inverter is modelled as a constant power source, however, for fault analysis, the authors assumed the limiting current to be twice the rated current, for the worst-case scenario. The inverter current and voltage are considered in phase for unit power factor operation.

Does a PV inverter have a steady-state fault current?

In addition, it can be seen that the steady-state fault current of the PV inverters is practically the same for different power factor conditions, i.e., from 1 to 1.1 pu of the pre-fault current (1 pu). In Bravo, et al. (2015), another inverter model is investigated, and the results are also in agreement with the generic group from Table 4.
